

INDUSTRIAL PLANTS & TERMINALS

Tekfen Engineering's main stream of engineering works comes from Industrial Plants and Terminals due to his expertise in heavy-duty engineering. The industrial plants where Tekfen Engineering accumulated valuable experience could be listed as follows:

- Storage Facilities and Tank Farms
- Phosphoric Acid Plants
- Sulphuric Acid Plants
- Pharmaceutical Facilities
- Coal Washing Plants
- Substations

With the establishment of the process engineering department, Tekfen Engineering not only provides detailed engineering services for the industrial plants but also develops the front end engineering design for the processes where he has the expertise.

One of the areas where Tekfen Engineering is investing to further develop is the marine engineering capabilities. Tekfen Engineering had already provided detailed engineering services for loading and unloading terminals, jetties and single point moorings for very large vessels.
